STITCHIA

INTRODUCTION

Stitchia is creating open-source crowd finance DAOs (cfDAO) - **Protocol, and Blockchain Ecosystem** for decentralized, multi-chain, **sustainable crowdsourcing**.

cdDAO protocol enables the operations of Stitchia's cfDAOs - Decentralized Autonomous Fundraising Organizations (DAFOs), which live on the EVM compatible **StitchiaChain**.

cfDAO Launchpad provides the infrastructure needed for communities, companies, projects and individuals to self-fund themselves and bring their assets on-chain via Initial Offerings (ICO,IDO,STO,ILO,IFO and others), and for DAOs to be able to operate with assets in a legally compliant environment.

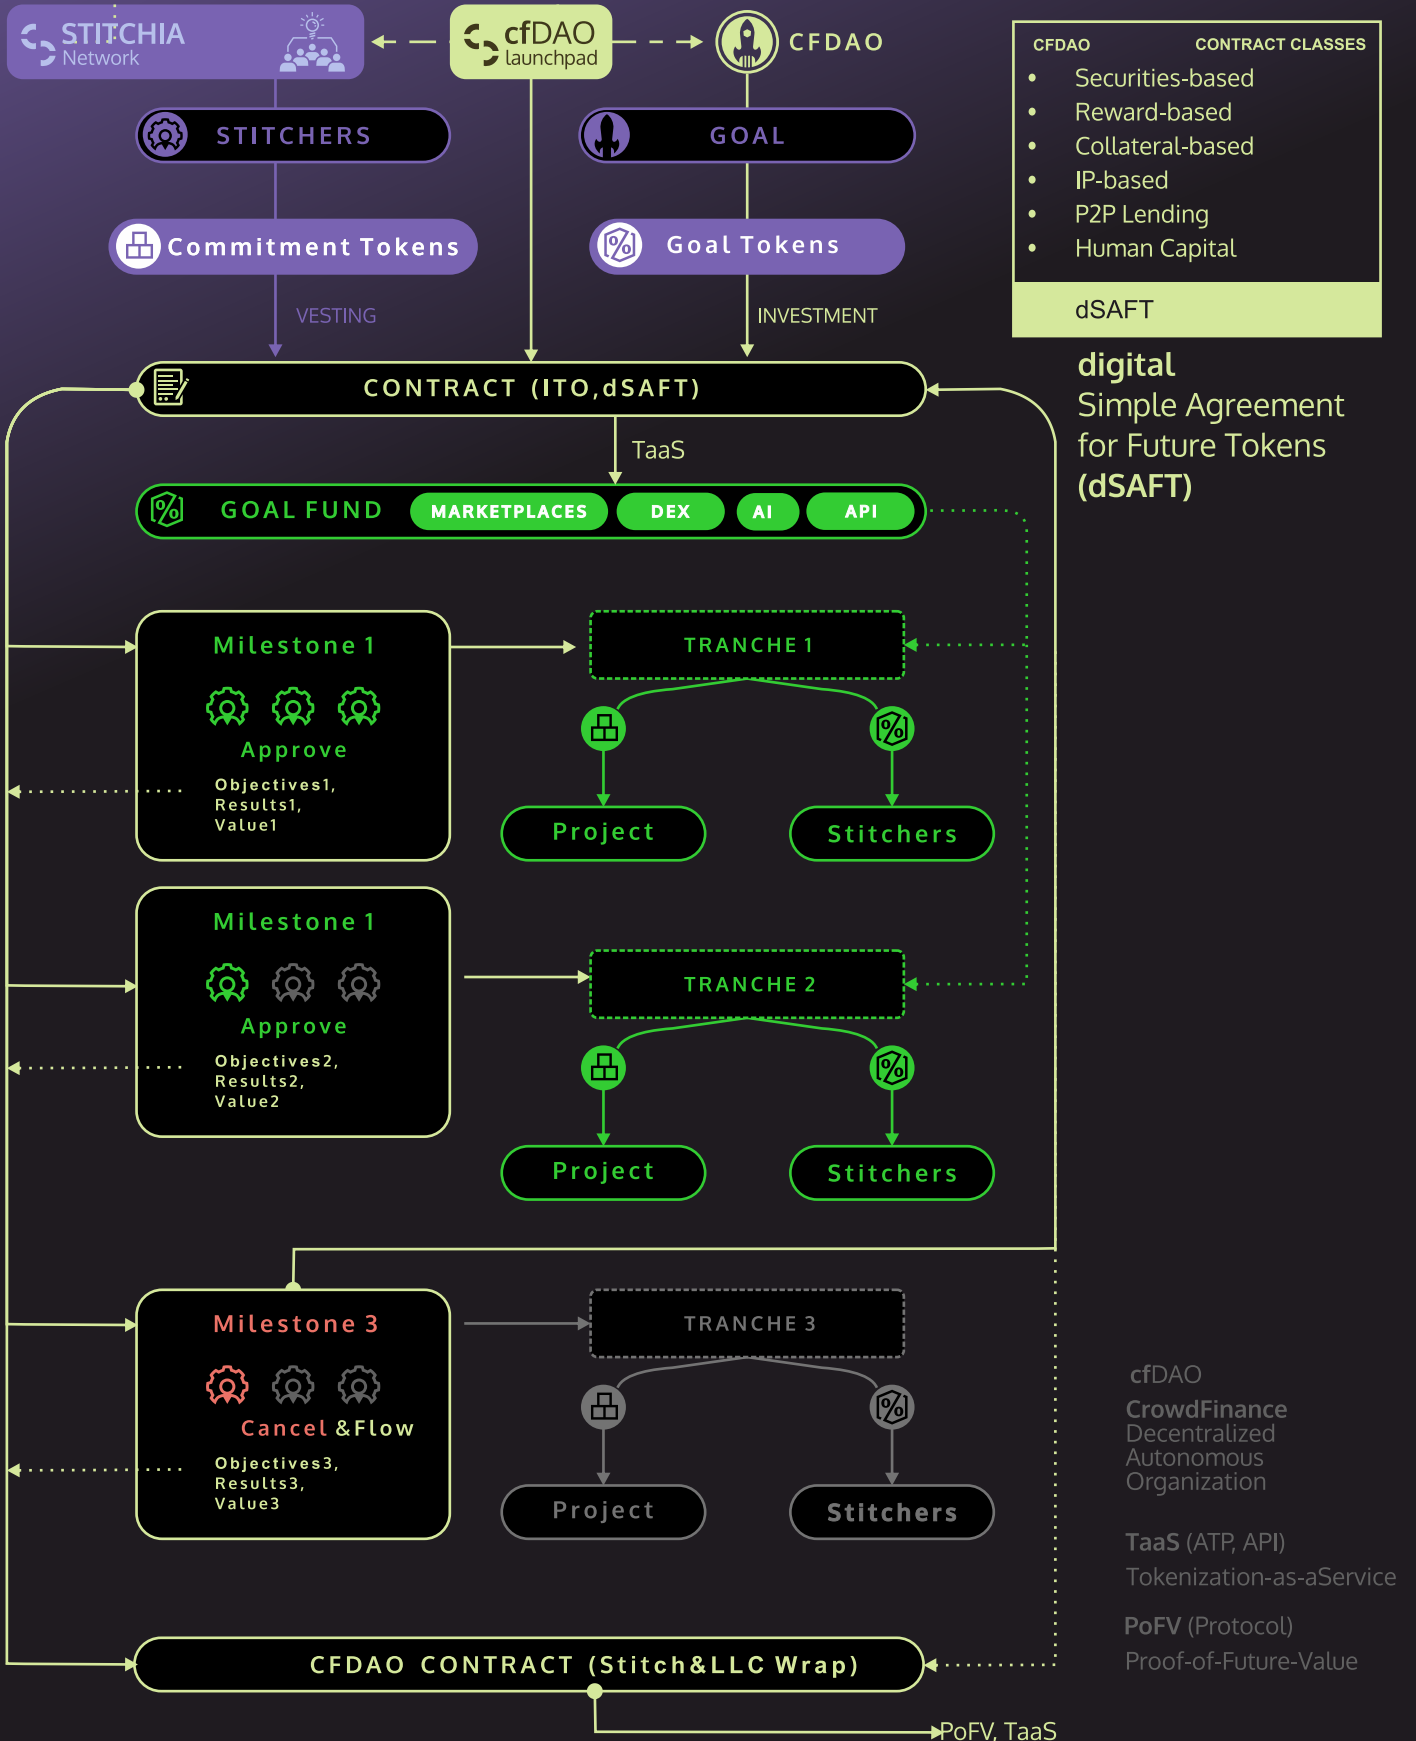

Our goal is to enable and empower the emergence in the world for a new fully tokenized reality.

Stitchia Ecosystem provides the user with an easy to use interface that is best-in-class, allowing to onboard companies, DAOs, investors, and service providers into a EVM compatible Blockchain Ecosystem.

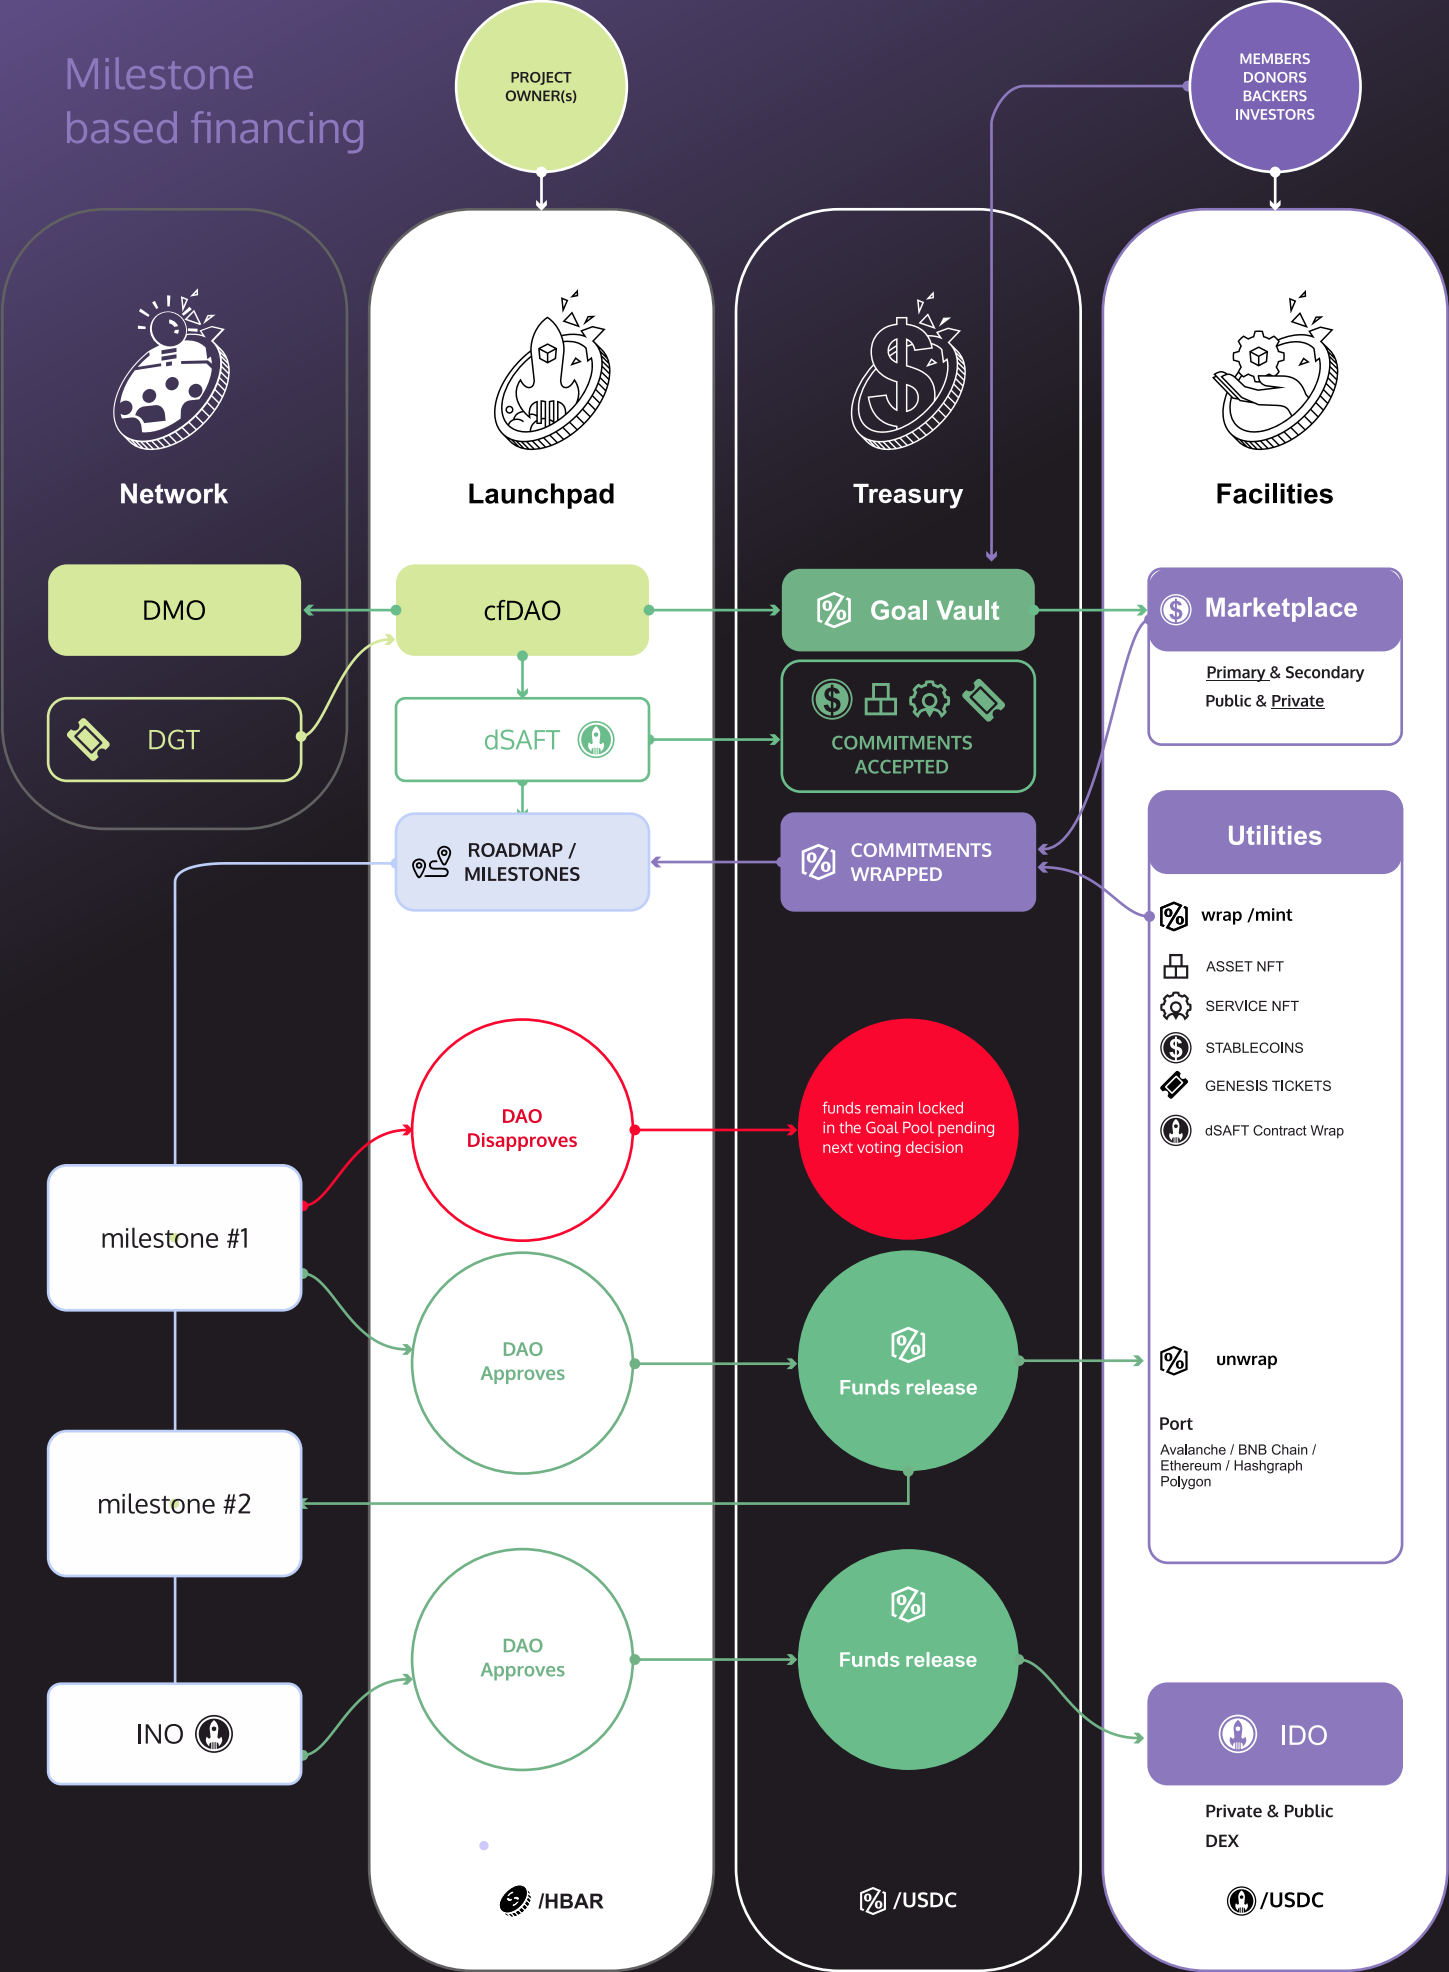

The primary objective of Stitchia is to address the limitations of existing crowdfunding / fundraising platforms by leveraging a decentralized environment enabled by the EVM and powered by Hedera Hashgraph DAG and Ecosystem.

Architecture

Stage 1

Stitchia Virtual Node (vNode)

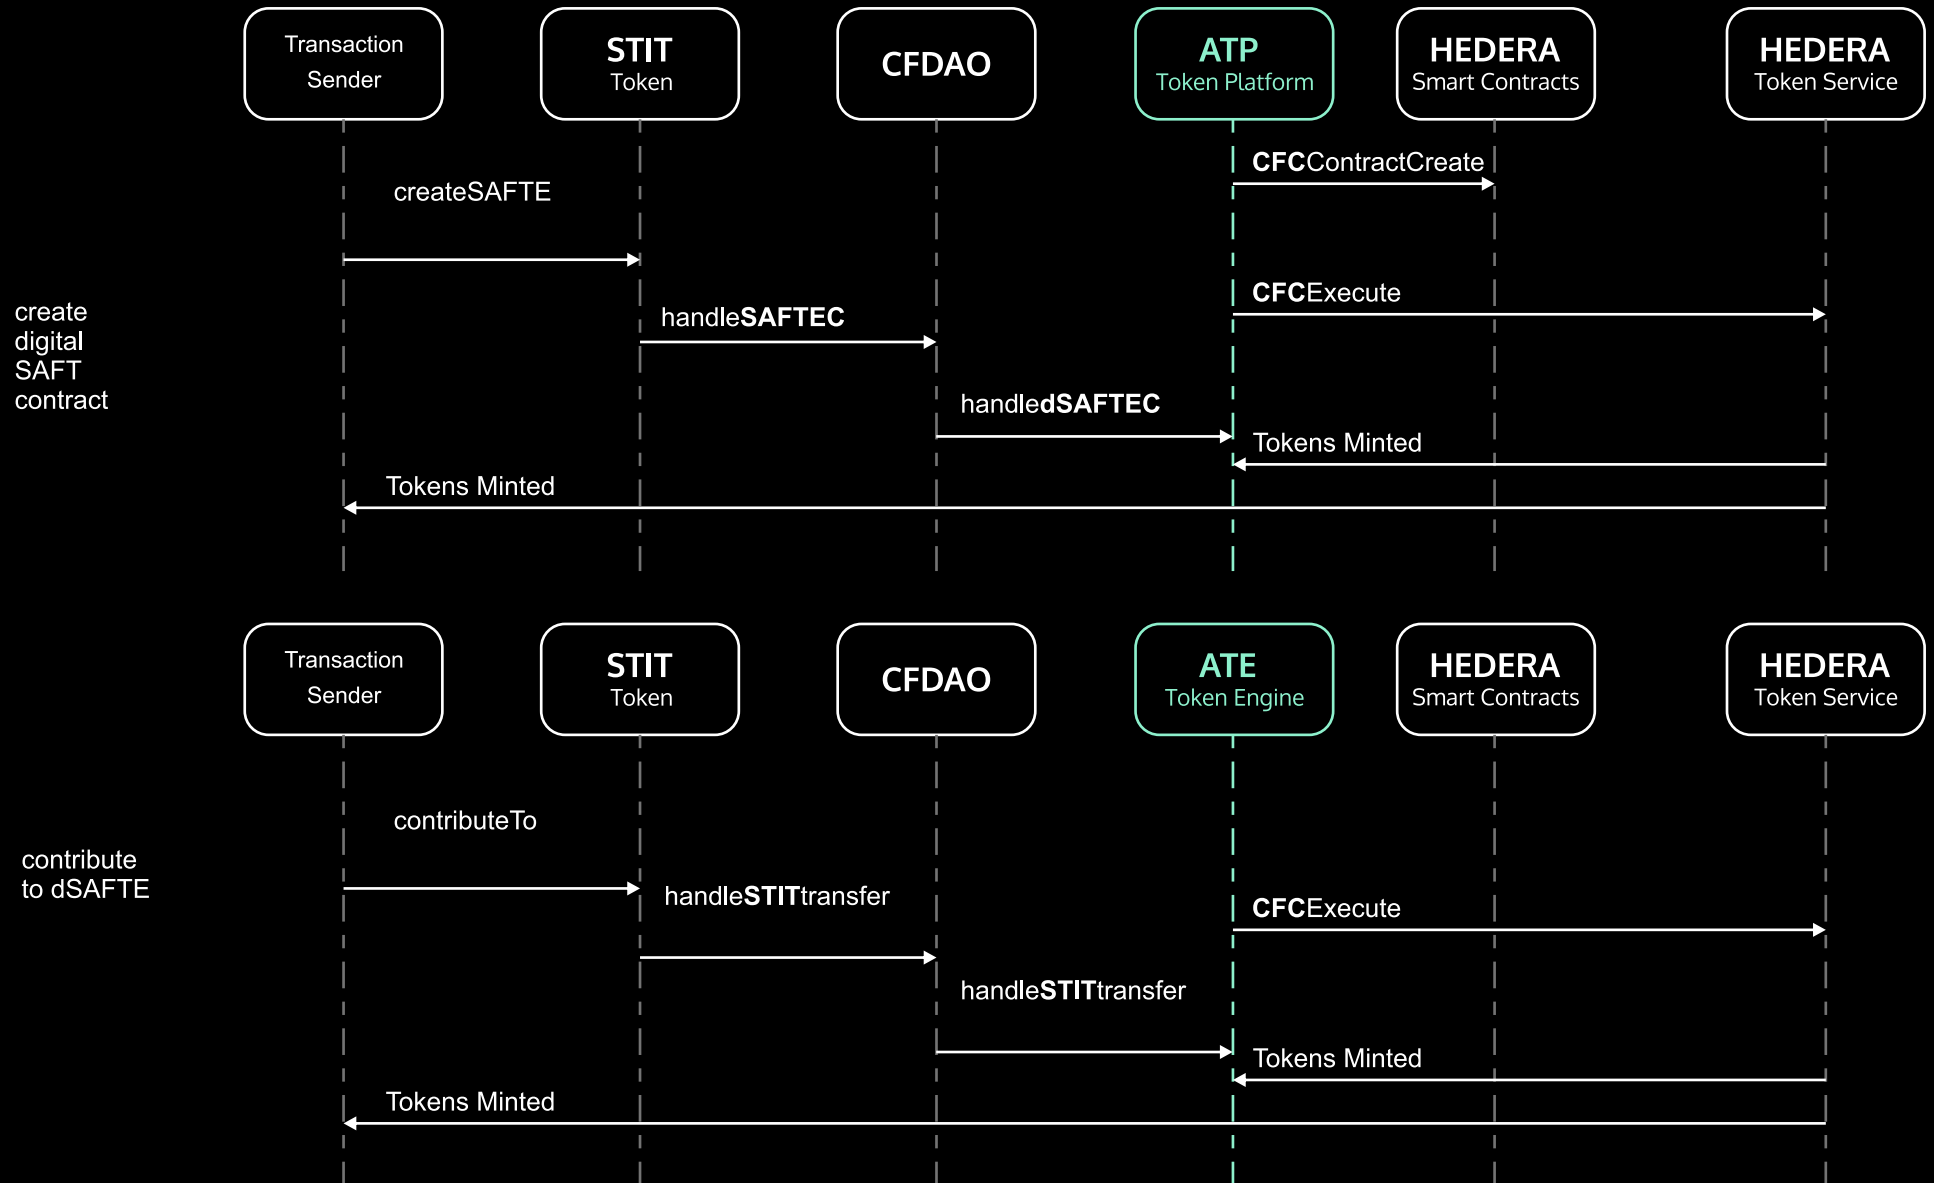

Stitchia's vNode is layer 3 platform solution (Dapp) based on the Hedera Ecosystem.

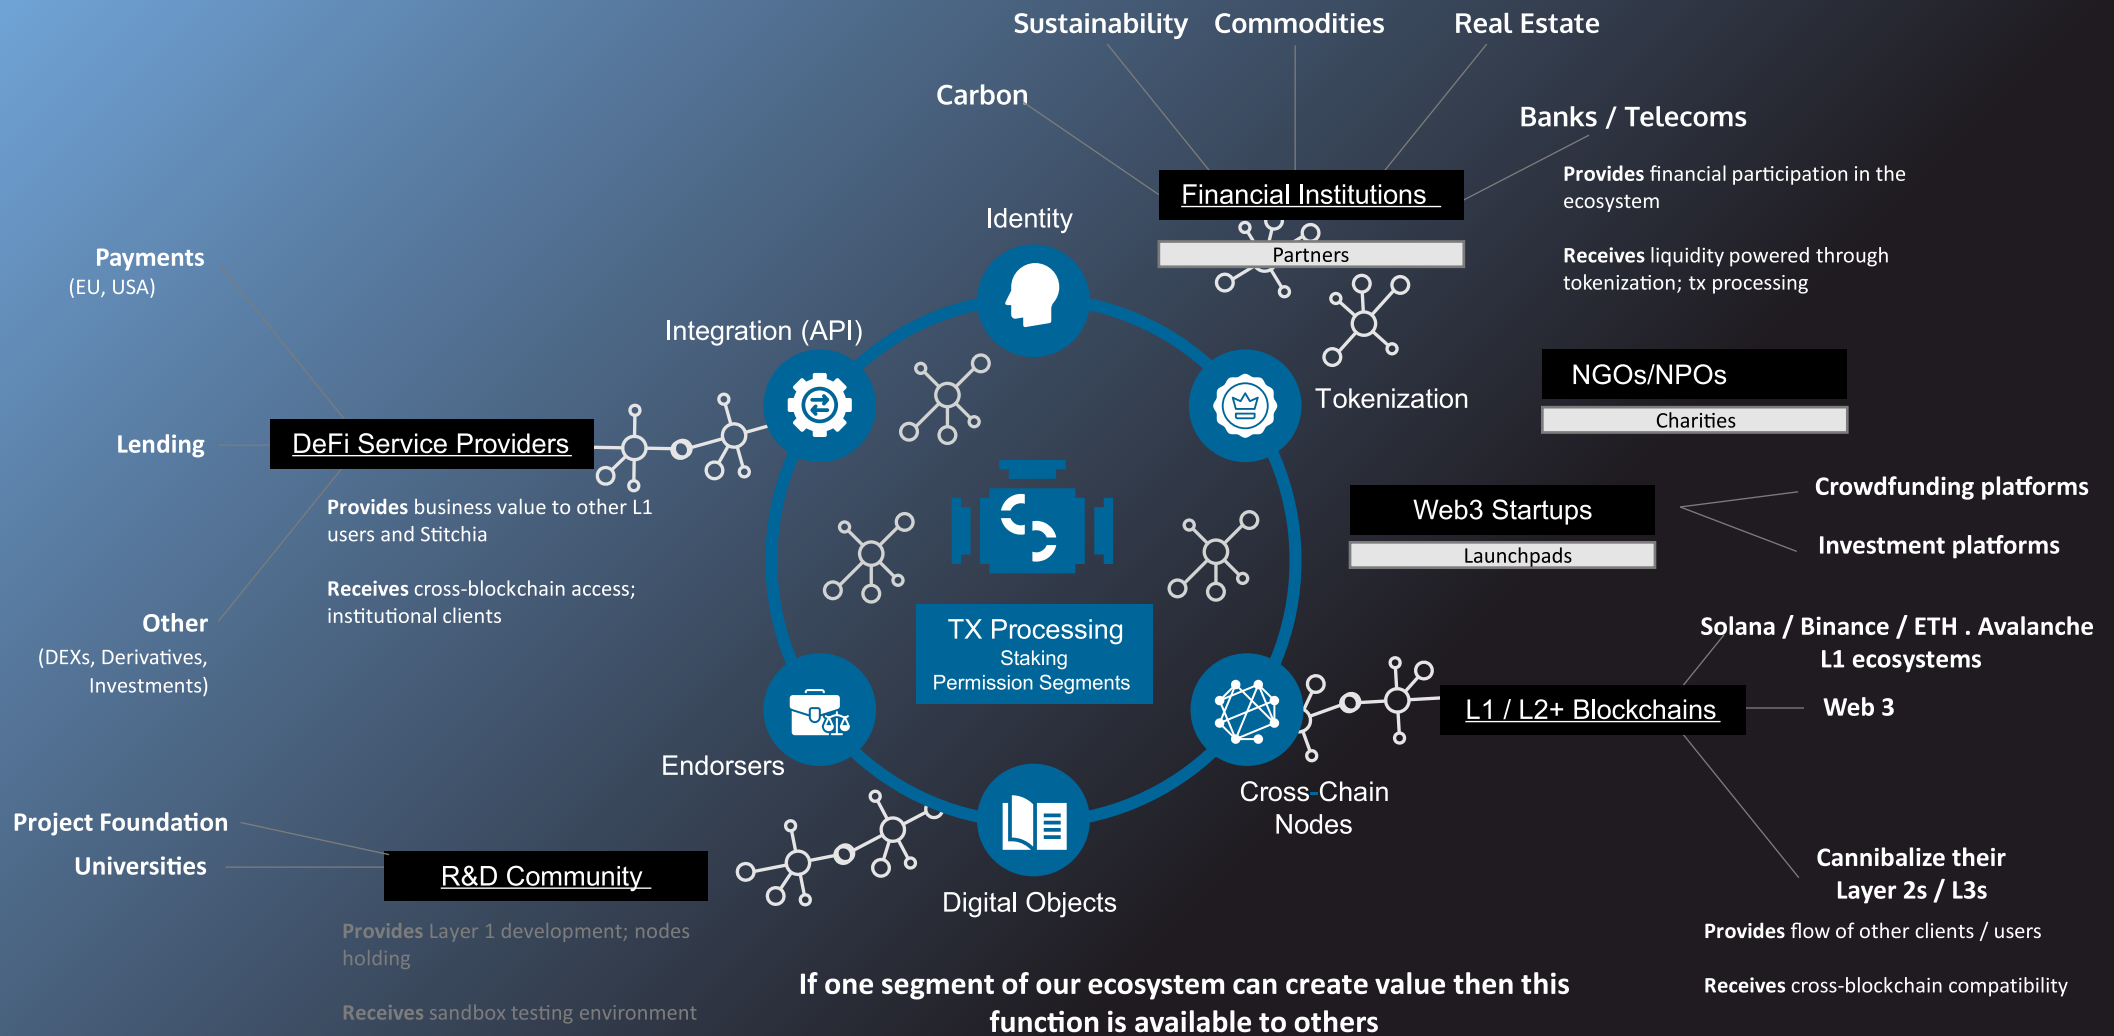

STITCHIA

STIT TOKEN

STITT is the native token of the Crowd Finance DAO Protocol, Stitchia Ecosystem and Platform. It is an ERC20 utility token that is aimed to fuel the economy around the protocol and ideas of fair and open blockchain based investing of the future.

Stitchia is an integrative financial ecosystem, bridging value across centralized and decentralized institutions

If one segment of our ecosystem can create value then this function is available to others
