

SYNQ Tokenomics v3.2 — Professional Investor Edition

1. Executive Summary

SYNQ Tokenomics v3.2 presents a professional-grade economic framework for the SYNQ token within the Stitchia Protocol. This model combines robust token utility, regenerative economics, and sustainable governance to create lasting value for all stakeholders.

2. Vision & Market Context

SYNQ positions itself as the financial backbone of regenerative decentralized ecosystems. In a rapidly evolving market that demands transparency and measurable social impact, SYNQ merges DeFi efficiency with regenerative economics.

3. Token Utility & Governance Matrix

Core utilities include staking for yield, treasury participation, governance voting, and Impact FX integration. This ensures constant token velocity while reinforcing DAO liquidity and community involvement.

4. Economic Architecture

SYNQ maintains a capped supply of 100 million tokens. Treasury mechanics are regenerative: each transaction contributes a percentage toward DAO operations, green liquidity, and community growth. This circular design drives economic resilience.

5. Distribution & Vesting

Founders & Core Team: 20% (48-month vesting, 12-month cliff) ■ Investors: 25% (24-month vesting, 6-month cliff) ■ Community: 15% (36-month vesting, 12-month cliff) ■ Treasury: 40%

6. Impact FX Model

The Impact FX system links each transaction to measurable sustainability outcomes. A portion of staking yield and network fees is routed into verified regenerative projects through the ImpactRouter contract. This creates a financial loop that rewards ethical participation.

7. Financial Model Highlights

Key revenue drivers: staking fees, liquidity incentives, and Impact FX routing fees. Cost centers: protocol maintenance, sustainability verification, and ecosystem development. Projected annualized DAO growth: 150–200%, based on sustainable participation metrics.

8. Governance & Compliance

Governance is on-chain and reputation-weighted, combining SYNQ holdings with PulseScorer impact indexes. Compliance framework aligns with MiCA and emerging ESG DeFi standards, with full transparency via DAO registry.

9. Investor Thesis

SYNQ is an investable bridge between finance and ethics. The regenerative model compounds yield while creating measurable global good—aligning financial ROI with social impact.
